Description

opium.lan.april-int est une machine vserver au meme titre que [source:puppetmaster/manifests/vserver-pavot.pp](https://puppetmaster.com/manifests/vserver-pavot.pp) le **node 'pavot.april-int'**, Il faut créer un nouveau manifest puppet vserver-opium sur le même modèle et l'associer aux service:

```
include april_ssh
include april_nagios::check_ssh_port
```

Pour en tester le bon fonctionnement il faut aussi faire un test sur le modèle de [source:puppetmaster/manifests/pavot.april-int/test-in-openstack.sh](https://puppetmaster.com/manifests/pavot.april-int/test-in-openstack.sh)

La regexp de facter ne match pas **inet adr:** qui est la traduction française de **inet addr:** dans ifconfig.
